Cue⁴

Cue⁴ enhances the industry proven MasterCue USB range, now providing for the significant expansion of PowerPoint presentation cueing control. Cues sent to the MasterCue system by either an event operator or the presenter can now be electronically distributed to multiple computers running different versions of the same presentation.

This ensures the main, backup, translated, preview and/or notes versions of the presentation remain perfectly synchronised at all times. Should the main computer hang or some other problem occur for example, the backup computer can be switched to at any time, knowing it has remained in step with the main version.
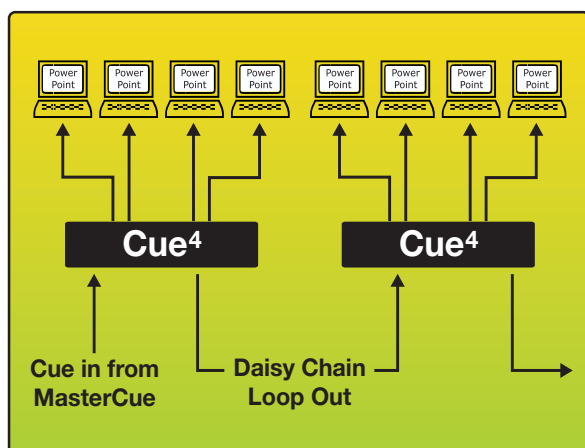

Each output of Cue⁴ is switchable, giving the operator control over which outputs will follow the main cue or be bypassed for manual control, in the case of a fault perhaps.

Cue⁴ has a loop output which provides for even further expansion through the connection of additional Cue⁴ units, thus providing for the simultaneous control of multiple presentation versions on any scale.

Main Features

- 4 USB independently driven ports for computer control

- Dual indicator LEDs for connectivity and port enable

- USB power – takes power from controlled computers

- No set up – plug in and go

- Control loop out for additional Cue⁴

- Small compact system

3 Year Limited Factory Warranty

Cueing Multiple Presentations Made Easy

Specifications
